

New for 2010

PRG – PROGRESSIVE RESCUE GRAB

We have been using Ascenders as mechanical prusiks in rescue systems for over 20 years. We know PRG Ascenders to be 100% reliable as proven in the field and PRS Belay and Testing Seminar. PRS created the ultimate rescue ascender. Exclusively available from PRS, the PRG is available in red (main line) and blue (belay line). Color-coding simplifies setting up rescue systems. We shortened the spring so the cam won't go into the shell backwards. We have etched a large arrow on the spine pointing to the load. Our new and improved the shell allows the placement of the pin easier. With our standard thumb cam, the PRG is the ultimate mechanical prusik.
